American Air, LLC

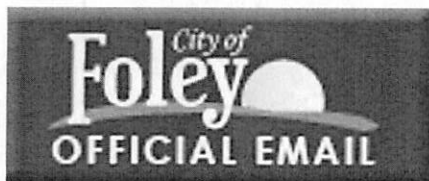

Air Duct and HVAC Cleaning

Scope of Work

1. Remove, clean, treat and re-install all supply and return registers.
2. Mechanically clean all supply and return ductwork, main components and turning vanes to remove dirt, dust, debris and biological growth.
3. Clean air handlers and air handler components.
4. Treat entire HVAC system with an antimicrobial agent to prevent regrowth of contaminants.

All equipment and materials used on this project are state-of-the-art and are standard to the air duct and HVAC cleaning industry.

Ducts will be accessed from the supply and return side registers except where access panels may be required. Any access panel installed will be thoroughly and completely repaired. Interior walls of ductwork will be cleaned using a rotating brush selected for the size and type of duct material to be cleaned. The dirt, dust, debris and biological growth are extracted from the ductwork into a vacuum system which is Hepa filtered to 99.97% at 0.3 microns.
