ATTACHMENT A

SCOPE OF SERVICES

Goodwyn Mills Cawood, LLC (GMC) shall perform the following professional services.

1. Topographic Survey (Lump Sum \$6,500)

GMC will perform a topographic survey of the project area. This will consist of an approximate 50ft swath through the area where the trail is to be located to pick up topographic (one-foot contours) information and any existing vertical features. This task includes locating existing utilities, trees and infrastructure within the area.

2. Wetlands Investigation / Delineation (Lump Sum \$4,000)

A wetlands survey and delineation will be conducted by a Professional Wetland Scientist and Biologist in accordance with the 2010 Regional Supplement to the U.S. Army Corps of Engineers (USACE) Wetland Delineation Manual: Atlantic and Gulf Coast Region (Version 2.0). The jurisdictional boundaries will be flagged according to the three required wetland criteria (vegetation, hydrology, and soils). Streams will be classified as ephemeral, intermittent, or perennial. The scope of work will include all fieldwork necessary to delineate any jurisdictional areas, as well as surveying and mapping. The waters of the U.S. including wetland areas will be surveyed with a mapping grade (sub meter) GPS system. Please note this method of surveying is not considered survey grade. This method of surveying is approved by the USACE and does not require a certified stamp from a Licensed Professional Land Surveyor (PLS).

3. Engineering Design / Construction Documents (Lump Sum \$26,250)

GMC will provide civil design and construction documents for the project based on the preliminary alignment. The design documents will include geometric layout, grading, drainage, trail build-up as well as erosion control and best management practices.

4. LID Practice Assessment & Design: (Lump Sum \$12,500)

GMC will conduct a preliminary site assessment and meet with the City to discuss the preferred types of demonstration LID practices and potential locations at this site. GMC will then conduct additional field assessments at the potential LID practice sites using a soil hand auger to investigate water table depth and soil texture in the top 3-6 feet. Depth to water table and soil texture influence the functionality and design parameters for LID practices, so the testing will explore if there are locations across the site that will be more effective for stormwater treatment. Based on the soil testing results and topographic survey, detailed engineering design plans and specifications for the LID demonstration practices will be created to include a plan view of the practice, cross section, and connection with other drainage infrastructure. The LID practices will be designed and sized per the "Low Impact Development Handbook for the State of Alabama," and target the water quality ("first flush") design event of 1.5 inches.

Service Exclusions:

- Geotechnical investigation & reporting (provided by Owner)
- Geotechnical CMT Services
- Landscaping / irrigation design services
- Permitting
- Services related to contract administration, bidding or procurement.
- Construction Surveillance
- Any services other than those which are detailed above
