

AMERICA'S

STAR

LIBRARIES

By Ray Lyons &
Keith Curry Lance

Historically, the four measures included in the *Library Journal* Index of Public Library Service (sponsored by Baker & Taylor's Bibliostat) have been circulation, library visits, program attendance, and public Internet computer use. Now, the design of the *LJ* Index is beginning to evolve. The stars have finally aligned to add a fifth statistical measure to the scoring—circulation of electronic materials, or e-circ for short. Because the *LJ* Index is based on data collected by the

His articles have also appeared in Public Library Quarterly, Library & Information Science Research, and Evidence Based Library and Information Practice. He blogs on library statistics and evaluation at libperformance.com. Keith Curry Lance, keithlance@comcast.net) is an independent consultant based in suburban Denver. He also consults with the Colorado-based RSL Research Group. In both capacities, he conducts research on libraries of all types for state library agencies, state library associations, and other library-related organizations. For more information, visit www.KeithCurryLance.com

Public Libraries Survey (PLS)—a federal-state cooperative project of IMLS and the state library agencies—the Index could not add new measures until PLS did.

WHAT IS E-CIRC AND WHY DID WE ADD IT?

The definition of circulation of electronic materials (e-circ) for PLS appears clear and stable. E-circ involves ebooks and downloadable audio and video but not licensed databases or what PLS now calls electronic collections. While database use is important, it is notoriously difficult to measure owing to the variety of databases and different ways in which their usage is counted. Apart from adding a couple of sentences to underscore that e-circ is limited to ebooks and downloadable audio and video, the definition remains essentially unchanged, including the explicit exclusion of databases.

We did not add e-circ to the *LJ* Index in 2015 because ten states had not yet begun to collect the requisite data. This was owing to a built-in delay in the PLS; because of survey scheduling variations, it takes some states a year longer than others to report a new item. This year, with only one state (Maryland)

not yet reporting e-circ data, we decided that it was time to add it to the index. Unfortunately, this resulted in excluding Maryland libraries from the *LJ* Index this year. We hope to see them return in 2017 and encourage all states to be as early adopters as possible of new PLS data elements.

The PLS definition of total circulation is straightforward: the total annual circulation of all library materials of all types, including renewals. Not only was that definition unchanged be-

set—the one on which 2015 *LJ* Index scores were based—a separate count of e-circ has been requested.

So, not only is e-circ a newly established data element, it also raises questions about reporting practices in recent years for total circulation. Our hope is that seeing these two figures interact in the *LJ* Index scoring process will help to improve the quality of both elements.

The question remains: If e-circ is a subset of total circulation, should e-circ have been considered for inclusion in the *LJ* Index? No other PLS figures that are subsumed in existing *LJ* Index statistics have been used in the Index, e.g., circulation of children's materials and attendance at children's programs. However, we now include e-circ because it represents a new kind of public library use, which—like as-yet-unmeasured database use—no longer requires most users to visit a physical library. The assumption that the overwhelming majority of public library use is connected with in-person visits is no longer tenable.

OVERVIEW OF STAR LIBRARY CHANGES IN 2016

Eligible libraries are grouped by total operating expenditures and then, within each of those groups, rated based on how their five measures compare to the peer group's means (or averages) of these five measures: library visits, circulation, program attendance, and public Internet terminal use—and, now, electronic circulation. As always, the constellation of Star Libraries changes with the data reported, the movement of public libraries from one spending peer group to another, the relative fortunes of libraries in the same peer group, and the actual fortunes of individual libraries.

Table 1 reports the means against which library measures are compared and the standard deviations (SD), which indicate the average difference above or below the mean for all libraries in each spending category.

NEW STARS

Table 3 lists counts of libraries belonging to each expenditure category each year. In the 2016 edition, 199 of 2015 Star Li-

The *LJ* Index of Public Library Service 2016

tween 2014 and 2015, this deliberately all-inclusive definition has been unchanged for at least two decades. Since 2014, ebooks and downloadable audio and video files have been explicitly defined as “materials,” and nothing in the total circulation definition excluded electronic materials. The definition has long said “materials of all types” and “in all formats.” Consequently, e-circ should be a subset of total circulation and thus already included in that long-standing service output. But, in practice, is it?

A thorough review of the 2014 PLS data set suggests the likelihood that there are still a few public libraries out there that do not understand that e-circ should be included in total circulation. Or perhaps the electronic materials landscape is so varied from state to state that some states—or perhaps even local libraries—have a built-in advantage because of their particular arrangements. Our hope is that adding e-circ to the *LJ* Index will help reveal the sources of this data variability—and potential inconsistency—so that the reporting of these two figures by libraries nationwide will become more accurate and stable. Our strongly held belief is that data is improved by being used and exposed to the light of day.

Interestingly, the consensus of opinion among decision-makers about state and national public library data on library materials and their circulation is somewhat disjointed: so far, separate data have been collected about public library holdings in various physical formats (print books and physical audio and video materials, like CDs and DVDs) as well as, more recently, in digital formats (ebooks, streaming audio and video), yet when it comes to circulating items in these disparate formats, everything is combined. Since the 2013 data

KEY: M-Millions K-Thousands

braries retain Star status, though their numbers of stars may have changed. There are also 61 new or returning Star Libraries that were not awarded stars in last year's edition.

Among libraries spending \$30 million or more, the lone new Star Library, with three stars, is Salt Lake County Library Services.

Among libraries spending \$10 million-\$29.9 million,

there are seven new Star Libraries. Beverly Hills Public Library, CA, is a new five-star library. Tulsa City-County Library System and Berkeley Public Library, CA, are new four-star libraries. And new three-star libraries include Pikes Peak Library District, CO; Loudoun County Public Library, Leesburg, VA; Central Arkansas Library System; and Charleston County Public Library, SC.

Among libraries spending \$5 million–\$9.9 million, there are seven new Star facilities. Washington County Cooperative Library Services, OR, is a new five-star library. Brent-

wood Public Library, NY; Half Hollow Hills Community Public Library, Dix Hills, NY; and Vernon Area Public Library District, Lincolnshire, IL, are new four-star libraries. New three-star libraries include Pueblo City-County Library District, CO; Cerritos Public Library, CA; and Comsewogue Public Library, Port Jefferson, NY.

Among libraries spending \$1 million–\$4.9 million, there are five new Star Libraries. Lancaster System Administrative Unit, PA, is a new five-star facility. Sanibel Public Library, FL, is a new four-star library. And new three-star libraries include:

How E-Circ Changes the *LJ* Index

When we first designed the *LJ* Index of Public Library Service in 2008, it was based on IMLS data from FY06. At that time, most public library use was in-person, building-based activity. If someone wanted something to read or needed information, they went to a library and checked out a book or a CD, video, or DVD; attended a program event; or used a library computer. Consequently, when designing the *LJ* Index, we expected to see fairly strong correlations between each of the four variables that contributed to the Index score.

This year's addition of e-circ is a game-changer in more than the obvious way. Certainly, adding a fifth measure to the index design alters it in purely statistical terms; however, it also changes the index conceptually. We are no longer working on the old assumptions about most public library use being in-person and building-based. While someone could download an ebook or an audio or video file at a library, it is probably at least as likely that they would do it remotely from their home, workplace, or elsewhere. This raises an intriguing conceptual question: What relationship, if any, should we expect between output measures that are at least somewhat

tied to physical use versus measures that are more virtual?

To answer this question, we conducted a correlation analysis similar to the one on which the *LJ* Index was based originally. Only this time, we added e-circ into the equation (see Table 2).

What we found is that, while e-circ is positively and significantly correlated with the four long-standing *LJ* Index measures, the strength of its correlations with those other measures is weaker, below .25. Considering that e-circ does not require a physical library visit and isn't necessarily strongly tied to program attendance or computer use, this was not surprising. What might surprise some is that the correlation between total circulation and e-circ—which is supposed to be a subset of it—is also relatively weak by previous *LJ* Index standards, though the strongest of e-circ's correlations with other measures.

If e-circ had been any measure of library use associated with physical library visits, such weak correlations might have led us to question the appropriateness of including it at all. Given what we know about e-circ's key difference from other measures, though, we consider it an appropriate and timely addition. This is particularly so, given what we know about the foreseeable

WHAT STAR LIBRARIES SAY ABOUT E-CIRC

Beyond the bird's-eye view, which the PLS data provides, we asked a dozen Star Libraries whose e-circ statistics were highest in their expenditure groups about their experiences and observations about circulation of electronic materials and collated the insights below.

ARAPAHOE LIBRARIES, CO

Cindy Phillips, manager of library materials services for Arapahoe Libraries, called attention to particular electronic materials formats and how patrons are responding differently to them. Like many libraries with high e-circ, Arapahoe Libraries offer a diversity of materials: ebooks, e-audiobooks, downloadable and streaming music, streaming video, and so on. The staff are also responding to the evolution of e-media by exploring the addition of downloadable games. Asked about patron response to electronic materials, she reported that those who use them love them, though they wish some of the interfaces were easier.

HUDSON LIBRARY & HISTORICAL SOCIETY, OH

Ohio's Hudson Library and Historical Society has been offering electronic materials since joining the Clevelnet consortium in 2003. Today, it offers ebooks and e-audiobooks through OverDrive, One Click Digital, Freading, and Tumblebooks; downloadable music through Freegal and hoopla; streaming video through hoopla, OverDrive, and InstantFlix; and digital magazines through Zinio and Flipster. No doubt, the variety of e-materials and platforms contributes to the library's high level of e-circ.

Asked how patrons are made aware of these bountiful options, Assistant Director Ellen Smith credited a number

of strategies for publicizing the availability of electronic materials. "In addition to prominent placement of these materials on our website through our 'Download It' tab, the library places frequent press releases in our local paper, social media, Instagram, Twitter, Facebook, and email blasts as well as through frequent instructional sessions (daytime, evening, and weekends) on how to download library materials, [and] one-on-one tutorials by appointment. Librarians also 'take the show on the road' to the area's assisted living facilities and senior centers, explaining all that is available through our virtual catalog and how to access it, and have appeared on local TV programs (in Cleveland), demonstrating how to download library e-media. For the last three years, the Hudson Library has also held a 'TechFest' to showcase all we have to offer regarding technology, and e-media is a big part of that demonstration."

PUBLIC LIBRARY OF CINCINNATI & HAMILTON COUNTY

Kim Fender, director of the Public Library of Cincinnati & Hamilton County (PLCHC),

Mountain Brook—Emmet O'Neal Library, AL; Belvedere—Tiburon Library, CA; and Coal City Public Library District, IL.

Among libraries spending \$400,000–\$999,999, there are eight new Star Libraries. New Port Richey Public Library, FL, and Leslie County Public Library, Hyden, KY, are new five-star libraries. Hewitt Public Library, TX, and Brewton Public Library, AL, are new four-star libraries. And new three-star libraries include: Oak Bluffs Public Library, MA; Homer Public Library, AK; Orrville Public Library, OH; and Bridgeport Public Library, WV.

Among libraries spending \$200,000–\$399,999, there are eight new Star Libraries. Columbiana Public Library, AL, and Richland Community Library, MI, are new five-star libraries. This group has no new four-star libraries but six new three-star institutions: John A. Stahl Library, West Point, NE; Roxana Public Library District, IL; Stinson Memorial Public Library District, Anna, IL; Ak-Chin Indian Community Library, Maricopa, AZ; Kankaska County Library, MI; and Garden Home Community Library, Portland, OR.

Among libraries spending \$100,000–\$199,999, there are six

TABLE 2 BIVARIATE CORRELATIONS BETWEEN LJ INDEX PER CAPITA MEASURES, FY14 IMLS DATA

LJ INDEX PER CAPITA MEASURES	LIBRARY VISITS	TOTAL CIRCULATION	CIRCULATION OF ELECTRONIC MATERIALS	TOTAL PROGRAM ATTENDANCE	PUBLIC INTERNET COMPUTER USE
Library Visits	1.000				
Total Circulation	.698	1.000			
Circulation of Electronic Materials	.247	.411	1.000		
Total Program Attendance	.554	.491	.171	1.000	
Public Internet Computer Use	.541	.420	.131	.340	1.000

NOTE: All of these correlations are significant at the .000 level

future of the LJ Index: more new output measures are coming, and, more likely than not, they, too, will focus more attention on virtual use of public libraries.

This year the addition of just one virtual output measure means that 20 percent of a library's final LJ Index score is dependent on virtual use. With the addition of another virtual output measure next year (Wi-Fi access usage), 40 percent of a library's LJ Index score will depend on virtual use. We hope the evolution of the LJ Index along these lines will encourage IMLS

and the state library agencies to facilitate the development of other virtual output measures to reflect more fully the range of ways Americans use their public libraries today.

The addition of e-circ to the LJ Index this year undoubtedly had an impact on which libraries achieved Star Library status. Most obviously, libraries that did not report e-circ for FY14 were not even scored this year. Similar exclusions were made early in the LJ Index's history, when late adopters took a few years to begin reporting use of public Internet computers. It is a certainty that some libraries have been enthusiastic early adopters of ebooks and streaming audio and video; those libraries gained an edge in the LJ Index scoring process as well as the recognition of Star Libraries. It is also quite likely that some libraries, perhaps some states, developed a dramatically stronger capacity for e-circ activity than others. And, of course, we must also recognize that as e-circ is still a relatively new data element (this being its second year of reporting for most libraries), it is likely that some libraries reported more generous e-circ statistics than other libraries generating comparable output. We hope that including them in the LJ Index will encourage those who report and use the data to examine their own data and that of their peers more closely. We believe this provides a powerful incentive for improving data quality.

credits her library's high e-circ to efforts that may not have yet been undertaken by other libraries that are newer to e-circ. "We have an e-branch on our website, we include ebooks in our features titles, we offer an e-Hot Author program that automatically notifies you when a new book by your favorite author is available, and we send emails to the cluster of cardholders who currently use or are likely to use digital content."

Fender also calls attention to her library's outreach efforts. "We provide iPads to some of our outreach customers. One cardholder had been receiving 50 audiobooks each month. It was difficult [for staff] to select 50 new titles [that often]. With her iPad, she can [now] choose and download her own titles, use social media and email, and access the Internet in general. If she doesn't like a book, she can choose another without wondering if she'll have enough books to last until the next outreach staff visit. She has also been able to read books again by enlarging the font."

While electronic materials are popular at PLCHC, Fender sees some cause for concern. "Even with libraries lending hot spots, the digital divide could become wider for our cardholders without ereaders and Internet access."

SEATTLE PUBLIC LIBRARY

Andrew Harbison, assistant director, collections and access, hears "great feedback on the convenience of e-content from our patrons who are increasingly expecting a high level of personalized, easy, on-demand access. Many of these patrons are accustomed to reading, watching, and listening on the go, across formats. The library's collections are built for quality and relevance, but they are also designed to be delivered efficiently and conveniently."

As a result, he is not surprised by his library's statistical trajectory on e-circ. "Demand for ebooks and e-audiobooks continues to increase substantially every year, as evidenced by circulation figures that increased 24 percent from 2014 to 2015. The number of active ebook and

e-audiobook users also continues to grow substantially, with a nearly 13 percent increase from 2014 to 2015. Interestingly, we are also seeing an increase in the average number of ebook and e-audiobook checkouts by individual users, [up] ten percent from 2014 to 2015."

TULSA CITY-COUNTY LIBRARY

Gary Shaffer, CEO of Tulsa City-County Library, attributes patron awareness of his library's growing collections of electronic materials to something "a bit old-fashioned. Monthly, we print the *Tulsa Book Review*, which is distributed across our county in bookstores, coffee shops, student lounges, etc., as well as in our libraries. It only features advertising from the library (a lot regarding our e-circulating items, our programs, and our partnerships). The *Tulsa Book Review* is also available on the Zinio platform to our library customers. Thus it, too, is a digitally circulating item. It also happens to be available freely to the customers of other Zinio libraries across the country who wish to offer it to their customers.

new Star Libraries. Parker Public Library, AZ, is a new five-star facility. Montevallo–Parnell Memorial Library, AL; Ava Ich Asit Tribal Library, Mohave Valley, AZ; and Quartzsite Public Library, AZ, are new four-star libraries. The two new three-star libraries in this group are Oxford Public Library, IN, and Pentwater Township Library, MI.

Among libraries spending \$50,000–\$99,999, there are eight new Star Libraries. Overbrook Public Library, KS, is a new five-star library. There are four new four-star libraries: Dr. Grace O. Doane Alden Public Library, IA; Gardner Public Library, Wakefield, NE; Huachuca City Public Library, AZ; and Wellsburg Public Library, IA. And new three-star librari-

es include Buhler Public Library, KS, and Saint Paul Public Library, NE.

Among libraries spending \$10,000–\$49,999, there are 11 new Star Libraries. New five-star libraries are Wilsonville–Vernice Stoudenmire Library, AL, and Double Springs Public Library, AL. The one new four-star library in this group is Pembroke Public Library District, IL. The remaining eight are new three-star libraries, including Bath Public Library, NH; Lanark Public Library, IL; Parker Public Library, SD; Scotland Public Library, SD; Henry D. Moore Library, Steuben, ME; Barton Public Library, VT; Arma City Library, KS; and Gilbertville Public Library, MA.

Next Year's New Statistic: Wi-Fi

Although IMLS has begun collecting data on Wi-Fi access usage, we did not include Wi-Fi use this year because there are ten states whose data reporting schedules mean that they will always be one year behind the other 41 in reporting any new data element. While we reluctantly excluded libraries from one state this year in order to introduce e-circ to the *LJ* Index, excluding libraries in ten was unthinkable.

However, we can give a brief preview. As we did for e-circ last year, let's take a first look at Wi-Fi access usage data reported for FY14.

The Wi-Fi access usage measure has been adopted by libraries and states very quickly. For FY14, 46 states—excluding only Illinois, Maryland, Rhode Island, Tennessee, and the District of Columbia—reported Wi-Fi access usage. However, not every library in those 46 states reported this new measure. Nationwide, 5,593 libraries reported Wi-Fi usage. Excluding the 19 reports from Maryland libraries, which were left out of the *LJ* Index this year over missing e-circ data, this

more patrons means we have been missing this burgeoning type of in-library virtual use, and, as a result, declines in reported computer usage numbers present a misleading picture of patron priorities.

WHAT'S STILL MISSING?

With the addition of e-circ to the *LJ* Index this year and the likely addition of Wi-Fi access usage next year, what is still missing?

Of the long-standing virtual services provided by most public libraries, the most conspicuously unmeasured use is of licensed databases—or, as the PLS now refers to them, electronic collections. The category of electronic collections is probably the broadest, most diverse concept addressed by the PLS.

In addition to the definitional changes moving from licensed databases to electronic collections, we also face an uphill battle in obtaining comparable usage statistics across vendors. Since January 2014, Project COUNTER (Counting Online Use of Networked Electronic Resources) has provided a register

of COUNTER-compliant publishers and vendors. Inclusion in this registry indicates that a publisher or vendor provides usage reports that have been audited and found to be in compliance with COUNTER's Code of Practice. The problem, of course, is that not all publishers and vendors and all of their database products are COUNTER-compliant.

If we are to make significant progress toward being able to collect usage data for electronic collections, public library officials who make purchasing decisions should insist that vendors with whom they do business become COUNTER-compliant. Until that, or some other standard, prevails, it will likely be

impossible to collect comparable and meaningful data about the use of electronic collections. We encourage IMLS, Chief Officers of State Library Agencies (COSLA), and individual state library agencies to collaborate on finding a way to resolve this pressing issue. Despite the absence of data, there can be little doubt that millions of items from electronic collections are delivered to public library patrons every day. And despite the level of investment in these products such access has required of most public libraries for several decades, we still lack even one definitive measure of the extent of their use. Surely, this must be the most conspicuously missing data about public library service output. We look forward to the day when database/electronic collection use can become the seventh measure in the *LJ* Index.

[WI-FI] IS ANOTHER OVERDUE ADDITION TO THE PLS DATA SET AS, FOR MANY YEARS, PUBLIC LIBRARY PATRONS HAVE BEEN BRINGING THEIR OWN DEVICES INTO LIBRARIES

means that more than three out of four (76.1%) of the libraries that received *LJ* Index scores this year also reported Wi-Fi access usage.

With the addition of the late-adopting states next year, we are confident that the tenth edition of the *LJ* Index will include Wi-Fi access usage as its sixth measure of public library service output. This is another overdue addition to the PLS data set as, for many years, public library patrons have been bringing their own devices—notebook computers, computer tablets, and smartphones—into libraries and accessing e-materials and collections directly. While it is very important for public libraries to continue to serve as public computing centers by providing free access to public Internet computers, the bring-your-own-device practice of more and

MORE, FEWER, AND LOST STARS

Each year, some libraries that remain in the same expenditure category as they did the previous year earn additional stars compared with the earlier edition. In this 2016 edition, 65 such Star Libraries moved between the three-, four-, and five-star ratings. Of those 65, 16 Star earners moved up from three stars to four, 11 from four stars to five, and—in only one case, Vincent-Lallouise F. McGraw Library, AL—from three stars to five.

Other facilities lost stars between the 2015 and 2016 editions. Without changing expenditure categories, 17 went from five to four stars and 20 went from four stars to three. No libraries dropped from five stars to three.

CHANGING CONSTELLATIONS

Ten libraries retained Star Library status despite moving from a lower to a higher expenditure category and, in two cases, the reverse.

Three libraries gained stars between 2015 and 2016 while moving up one expenditure category:

- Princeton Public Library, NJ, four to five stars, from \$1M–\$4.9M to \$5M–\$9.9M
- Brumback Library, Van Wert, OH, three to four stars, \$400K–\$999.9K to \$1M–\$4.9M
- Real County Public Library, Leakey, TX, four to five stars, \$10K–\$49.9K to \$50K–\$99.9K.

Five libraries retained their Star status while moving up one expenditure category:

- Carnegie Library of Pittsburgh, three stars, \$10M–\$29.9M in 2015 to \$30M+ in 2016
- Henderson Memorial Public Library Association, Jefferson, OH, three stars, \$200K–\$399.9K in 2015 to \$400K–\$999.9K in 2016
- Beresford Public Library, SD, four stars, \$100K–\$199.9K in 2015 to \$200K–\$399.9K in 2016
- Claude H. Gilmer Memorial Library, Rocksprings, TX, five stars, \$50K–\$99.9K in 2015 to \$100K–\$199.9K in 2016
- North Freedom Public Library, WI, five stars, \$10K–\$49.9K in 2015 to \$50K–\$99.9K in 2016.

Two libraries moved down an expenditure category between 2015 and 2016 while retaining their Star Library status. Skidompha Public Library, Damariscotta, ME, \$400K–\$999.9K to \$200K–\$399.9K, retained its four-star status, while Pelham Library, MA, \$100K–\$199.9K to \$50K–\$99.9K, gained a star, going from four to five.

The other libraries that moved from a lower to a higher expenditure category lost stars but retained their Star Library status.

TABLE 3 PUBLIC LIBRARIES ELIGIBLE FOR THE LJ INDEX AND REPEAT AND NEW STAR LIBRARIES, 2009–16 (BASED ON FY06–14 IMLS DATA)

EXPENDITURE CATEGORY	NUMBER OF LIBRARIES								
	NOVEMBER 2016 (2014 DATA)	NOVEMBER 2015 (2013 DATA)	NOVEMBER 2014 (2012 DATA)	NOVEMBER 2013 (2011 DATA)	NOVEMBER 2012 (2010 DATA)	NOVEMBER 2011 (2009 DATA)	OCTOBER 2010 (2008 DATA)	NOVEMBER 2009 (2007 DATA)	FEBRUARY 2009 (2006 DATA)

UNDERSTANDING STAR STATUS CHANGES

Library leaders often wonder why their library's star status changes from year to year. In last year's *LJ* Index article, we discussed several alternative explanations for changes in a library's Star status:

- Which libraries qualify for inclusion in the *LJ* Index in a given year (see FAQ).
- Changes in the output data reported by libraries within a spending peer group.
- Actual local changes in the library's output data.

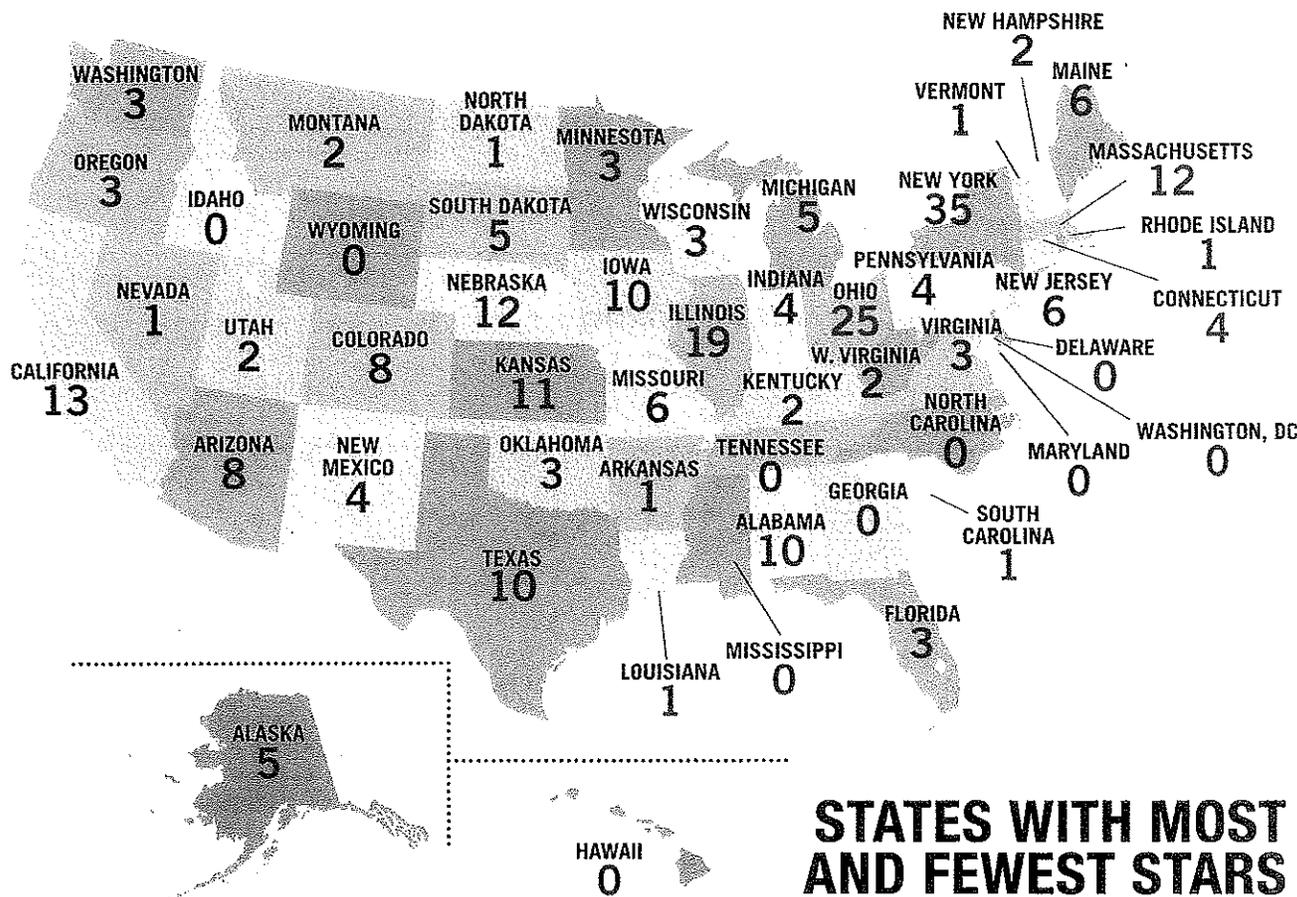

This year, there is another potential explanation: the first substantial change in the design of the *LJ* Index of Public Library Service. *LJ* Index scores have never been comparable from year to year, and this year's introduction into the calculation of a new per capita statistic, e-circ, only underscores this point (as well as causing the upper range of scores in each expenditure category to increase compared with prior years).

THE BASICS & HOW THEY'RE CHANGING

To receive an *LJ* Index score, a library must have a legal service area population of at least 1,000; spend at least \$10,000 annually; and report all of the data required to calculate its score.

Over this project's nine-year history, there has been a ten percent decline in the number of public libraries that serve a population of fewer than 1,000. According to IMLS's 2016 document, "Supplemental Tables, Public Libraries Survey, Fiscal Year 2014," there were only 972 libraries nationwide serving fewer than 1,000 people. Compare that with IMLS's 2008 document, "Public Libraries Survey, Fiscal Year 2006," in which there were 1,082 libraries nationwide serving fewer than 1,000 people.

There has also been a 58 percent increase in the size of the highest spending group—\$30 million or more—and a 31 percent decrease in the number of libraries in the lowest spending group—\$10K to \$49.9K. Comparing the first *LJ* Index, in 2009 (2006 data) to this year's (2014 data), the number of libraries in the highest spending group has grown from 31 to 49, while the lowest spending group shrank from 1,088 to 750.

STATES WITH MOST AND FEWEST STARS

The 2016 Star Libraries are found in 41 states. The top four states, ranked by their numbers of Star Libraries, are New York, 35; Ohio, 25; Illinois, 19; and California, 13. These are followed by a tie for fifth and six places shared by Nebraska, 12, and Massachusetts, 12, then Kansas, 11, at seven. Next, there is a three-way tie for places eight to ten shared by Alabama, ten; Iowa, ten; and Texas, ten. Like these top ten states, the remaining 31 Star Library states are scattered across the nation and in every major geographical region.

There are no 2015 Star winners in the District of Columbia or ten states. Four are the Southern states of Georgia, Mississippi, North Carolina, and Tennessee. Two of the remaining Star-less states are in the Rocky Mountain West—Idaho and Wyoming—in addition to Delaware and Hawaii. Also, this year there were no Star Libraries from Maryland because e-circulation was not report for all of that state's libraries, the only state for which that was the case.

Notably, two Southern states joined the list this year: Alabama and Arkansas.

Despite the fairly dramatic proportional changes in these basic criteria over the *LJ* Index's history to date, we do not yet see sufficient reason to consider adjusting any of these criteria. Since its earliest years, the *LJ* Index has enjoyed a high level of reporting compliance—the vast majority of libraries that met the population and spending qualifications reported all of the needed data, too. With a new statistic becoming involved in scoring libraries annually—e-circ this year and Wi-Fi access usage next year—it is probably inevitable that more libraries will be excluded from the Index because they fail to report a new statistic. We hope that wishing to remain included in the *LJ* Index and Star Library ratings will serve as an incentive for libraries to be early adopters of these important new output measures.

If you are new to the *LJ* Index and the Star Library ratings, please consult the FAQ (libraryjournal.com/stars-faq), which explains when, why, and how the *LJ* Index and Star Library ratings were created; how libraries qualify to be rated; the sources and limitations of the data used; and how the ratings do—and why they don't—address certain issues.

FIND YOUR LIBRARY
Explore the Star Libraries and look deeper into the *LJ* Index to find your library's peers via the online version of this article at libraryjournal.com/LJindex2016

There are also online-only resources linked from the web version of this article, including an expanded data file on all public libraries that received *LJ* Index ratings in the current edition, so that those from non-Star Libraries can undertake their own "do-it-yourself" peer comparison. Some ideas for such projects were included in last year's article (ow.ly/22bD304YhFI). ■

THE STAR LIBRARIES 2016

We are pleased to announce the results of the ninth edition of the *Library Journal* Index of Public Library Service, sponsored by Baker & Taylor's Bibliostat. The *LJ* Index rates U.S. public libraries based on selected per capita output measures. The 2016 *LJ* Index derives from data recently released by the Institute of Museum and Library Services (IMLS) for FY14.

In 2016, 7,349 U.S. public libraries qualified to be rated in the *LJ* Index of Public Library Service. This figure is somewhat smaller than last year's, in part owing to the introduction of the new output measure, e-circ. In this edition, there are 260 Star Libraries, each receiving three-star, four-star, or five-star designations.

Stretch your career options.

Staying flexible is the key to keeping up with the rapidly evolving information profession.

That's why the SJSU School of Information is quick to adapt—just like you. We continually update our 100% online curricula to align with emerging technologies and job trends. And we offer a wide range of electives and customized programs, so you can take your career in a direction you might never have thought possible.

Featured Online Programs:

MLIS • Digital Assets Certificate • Post-Master's Certificate

Accredited by the
American Library Association
